I'm running 2 card paris setup with one C-16 and one MEC, on a Mac with O/S 9.22. I'm getting an error message on start up. It says, Paris could not open because "Paris_studiocontrolLibrary" could not be found.

Thanks in advance.
KJ

this is related to your onboard effects presets. Not sure how/where to fix this on a Mac.

If the file is missing, I think you'll have to do a reinstall of the PARIS software. I'm not at my rig right now and can't remember which folder to check, so I can't tell you where to look to see if indeed the file is missing for sure or if it somehow got renamed, corrupt, etc. Anyway, a reinstall should put everything back to good.

Thanks Tony, I'm back up, but I'm having trouble importing an .aiff file.
It' has been a long time since I've used Paris, I thought I was able to
do this in the past???

"Paris_StudioControlLibrary" is supposed to be in the Extensions folder, inside the System Folder. If it's mysteriously not there, either a reinstall should fix it, or if you've previously installed Paris in a different disk/partiton, you could try dragging the file across (avoiding the PACE hassle is always nice)

Glad you got it working. Yes, PARIS will only import .wav, .sd2 and of course .paf files. .wav and .sd2 only at 16bit. I use soundApp all time to convert 24bit sd2's to 24 bit paf's. It's a great little program.
