I now got 2x eds1000 + 2xmec + 2x a8in
3x aut + if2.

I'd love to have a setup so i can record stuff on seperate tracks.
I'd love to hook up some external fx.
And rout the channels into a summing mixer i have.

I run 2 MECs w/ 16-in and 8-out on each. I have a Mackie 1402 that I use to some the outputs of MEC 1 and MEC 2 when necessary but I seldom do so. I usually give the players the same mix as I listen to in the CR which uses only the main out from MEC 1. I also have a Lexicon PCM 91 reverb which I drive with a parallel ocnnect from MECs 1 and 2. The digital out of the PCM 91 returns to the digi in of MEC 1. I seldom run other outboard but when I do I just use analog I/O from the MECs.

HOpe this helps!

Thanks for the reply.

I wonder how you configure the patchbay?

Could you perhaps post a screenshot off it?

So i guess you got the channels going into the mackie.
And the mackie's mainmix is routed to?

I send my main mix outs (NOT CR outs, which "hear" solo tracks) to MEC 1 outs 3 & 4 => Mackie line in =>. Aux bus 1-2 is routed to "external", then in PB those outs go to MEC 1 outs 5 & 6. MEC 2 outs 1 & 2 are paralleled with those thru my "real" patchbay to the inputs of my PCM 91 which returns digitally to the MEC 1 Master module's digi inputs. Mix out of the Mackie goes to my Coleman Audio TB-4 (inserts talkback and controls routing) => my cue amp inputs => headphone distribution.

There is also a way to create headphone mixes using aux sends that are unaffected by mixer changes but I rarely do that.

Does that make sense? I'm not in the studio so I can't make screenshots...
