Subject: Simple Creamware-Scope setup Question

I've read DJ's posts about the scope cards and I'm giving some thought to
perhaps getting a the scope "home" card. I only have one EDS card and I'm
not sure if I've got this right. I'm thinking that I'd like to run the
scope card on the same system as Paris (AMD Athlon 1.7 -or something like
that speed, haven't got the box in front of me). I'm guessing that I'd have
to get an ADAT card for Paris and route the 8 aux sends to the scope card,
with the returns coming back through the same ADAT line. Scope is saying
something like 3ms latency. Have I got this right? Would something like
this work?
Thanks!
MR
