
Subject: MAGMA woes - Error 1/1 - please advise

I'm excited to have 48 tracks here, soon, but:

I get the dreaded 1/1 error. I've checked all my connections.
3 EDS cards in a Magma chassis, plugged to the interface which
is in the bottom PCI slot of my new Athlon 64. MEC connected
diretly to the master EDS card.

I noticed that my PC gave each EDS card its own IRQ. Does IRQ
even matter anymore on these newer machines? It seems like
there is plenty to go around.

Any ideas are welcome. Thanks!!

Chris

No shit! I was gonna give him some bullshit advice that
would've NEVER worked, under ANY circumstances, knowing that if
his system it wasn't working now, me giving him advice that
would've still not made it work would have at least gotten him
no further behind than where he already was... perfect, yes?

LOL

:D
