Is there any way to do eq automation? Some tricky way would be fine.

<http://www.analogx.com/contents/download/audio/pmidi.htm>

It's the Paris. It's got MIDI. Nuff' said. Automation of ALL of the controls on the MiniMixer display, from the fader, to the EQ, effects, panning, phase, etc, etc, etc! Now supports MIDI TRANSMISSION of fader movements/mutes/solos, as well as imbedded support for the Yamaha Promix/01 mixer for, you guessed it, flying faders! Unlock the potential of the Paris today, with ParisMIDI! You must have a MIDI interface on the same system as the Paris in order to use this program. Make sure to read the enclosed documentation to find out how to configure and run the program properly!

If just for a single track, seems like you could use another duplicate track with eq set and then automate faders for the 2 tracks - sort of a crossfade between tracks..

That's what I've been doing and was looking for a more elegant way. Anyone used that midi thingy Aaron is posting?

It appears that if you use the Analog x midi thingy then you can't use your C16 at all. Or I'm misreading the docs. Has anyone used this thing?
