Hey everybody, I'm sorry if this has been discussed before. I tried a search on it and didn't really find anything, though that may be due to my lack of search skills...I've been running PARIS 2.2 on a Win98se machine for years and I'm doing a little remodeling inside the computer. I know there are WinXP drivers but I've only heard about them working on v3. Does anybody know if they will work on v2.2? I'd love to get more RAM going.

Thanks!
