I'm finally getting around to mixing one of the dozen concerts I've recorded at CST.

Instead of trying to put a room rev or plate on individual channels, I'd just like to put a little room on the final mix to add some of that "live" feel.

However, when I use one of the EDS plugins on the global master, I don't seem to have any wet/dry control - all I need is a taste, not to be drenched in verb.

Any ideas? Maybe mix it down to stereo, import those into a couple of tracks, and put something on those?

I throw myself on the wisdom of the Great Paris Brain Trust. That, and maybe Rick and Deej.

;-p

Thanks, guys.

I like this one. FWIW, you could import the tracks into eight (or more tracks) -four stereo pairs. This way you could apply several different room verbs from different plugs and see what you liked best.

This sounds like a job for SIR. You can use the VST wrapper to open this up in stereo on a pair of Paris tracks. SIR is free and has IR's of some *great* reverbs. I usually use my Quantec on full mixes. There are Quantec IR's available for SIR and it has a wet/dry control.

It's a major CPU hog, but you should be able to use it with a pair of tracks.

I be on MacOS9... isn't SIR for Winders?

I'll do some diggin'

I'll give that one a try. I should have some more time next week...
