Hello folks. I have a 3 card paris system running on a G4 500mhz machine. I want to upgrade to a faster G4. (BTW I've been a Paris user since it first came out in "98" and have always read these posts from all you folks - just never got involved much beyond that ) I've been told that some of the last G4s made don't run or support OS 9 - (which we need) Is this true? I'd like to get a dual processor 1.42ghz machine (or at least a dual 1.25) will they work OK? also I wonder - are the PCI slots in these machines compatible - Any and all input will be extremely helpful

Thanks in advance, Al

Hey Al! The last compatible G4 was the 1.25Ghz, the 1.42 FW 800 will not run OS9 and you may have problems with that one, WMMV. I think rick would tell you to stay away from the dual 1.42 machine! Don't go with a G4 dual 1.25, you'll pay more, they are a lot noisier and hotter than a single and there is no real benefit for Paris/OS9. I'm using a dual 1.25Ghz machine, wish I had a single processor machine, this one's noisy.

The cheap route. You can get a 1.25Ghz upgrade card for you computer for \$199.00 at OWC.com I've also seen them for \$149.00 before. You can go up to a 2Ghz G4 upgrade now, but I don't think it's worth the price currently.

I hope this helps!

Sorry Al, here's the correct URL: <http://www.macsales.com/>

There is also sonnet for G4 upgrades, <http://www.sonnettech.com/>

you can shop around for better deals on sonnet upgrade cards.
