Hi Parisians (I'm pleased that I'm not the only one left who's still got something going for the kit ;-),

can anybody advise me on how to get Paris to interact with a DM-3200. The idea is ultimately to replace the good old C-16s with the DM-3200 if this makes sense?

Thanks in advance

Hey there,

I could be wrong, but I don't think Paris will accept other control surfaces. There's kinda no provision within the interface for switching to something other than the c-16.

....big drag for me as well, as i'd like to get some flyin' faders goin' on instead of the null arrows....

cheers

jef

It can't be done unless someone knows a programmer who can build an interface to convert the midi out of the DM-3200 to "C-16 Language" that PARIS can understand. Sorry, I didn't mean to sound so sarcastic. It's not possible to control PARIS with anything but the C-16. :>(

Shame ;-) Thanks for commenting anyway.
