Hi Nappy,

Others will jump in with better info, but since I'm just newly back in my basic understanding is:

1. Yes, with the work that Mike Audet has been doing on the drivers, and the couple of utilities to bind paris to a single core.
2. Not to my knowledge.. (cough)..
3. Don't think so.
4. Yes, a couple of them, one new one which look pretty cool when I read about it. Kerry G can fill you in better on this. I think there's info on the Paris wiki he did.
5. Not sure, I've gone the 2 comps/lightpipe route, I figure that's the least stressful path with Paris. Wormhole is maybe what you were thinking of?

I also did get Paris running on my Mac Pro, but then reinstalled and had some issues (very likely pilot error in configuring), so I just ended up putting together a new single core Athlon pc for around \$200.

Cheers,

TC

- 1.Can you run PARIS on multi-core cpu's? I remember Edmund saying that PARIS was a multi-threaded app and would "just work" in his words when dual processors became available(this was in 2001?)
- 2.Is verison 3.01 available for PC free(I would think by now since its been dead for so long)
3. Is it possible to add Rewire to PARIS? I asked for this way back when Edmund asked for request. Everyone was asking for MIDI back then,I thought that Rewire would have been a better way to go,but who am I.
4. Any plugin compensation solution available?
5. If rewire is out of the question,how are the inter-audio transfer solutions? (Jack audio..I think one was called)

Could you list any other advances I might not know of.

respect
Nappy
