Subject: Re: Thinking of getting back into PARIS...some questions Posted by TC on Mon, 17 Nov 2008 06:42:01 GMT View Forum Message <> Reply to Message

Hi Nappy,

Others will jump in with better info, but since I'm just newly back in my basic understanding is:

1. Yes, with the work that Mike Audet has been doing on the drivers, and the couple of utilities to bind paris to a single core.

2. Not to my knowledge.. (cough)..

3. Don't think so.

4. Yes, a couple of them, one new one which look pretty cool when I read about it. Kerry G can fill you in better on this. I think there's info on the Paris wiki he did.

5. Not sure, I've gone the 2 comps/lightpipe route, I figure that's the least stressful path with Paris. Wormhole is maybe what you were thinking of?

I also did get Paris running on my Mac Pro, but then reinstalled and had some issues (very likely pilot error in configuring), so I just ended up putting together a new single core Athlon pc for around \$200.

Cheers,

ΤС

1.Can you run PARIS on multi-core cpu's? I remember Edmund saying that PARIS was a multi-threaded app and would "just work"in his words when dual processors became available(this was in 2001?)

2.Is verison 3.01 available for PC free(I would think by now since its been dead for so long)

3. Is it possible to add Rewire to PARIS? I asked for this way back when Edmund asked for request. Everyone was asking for MIDI back then,I thought that Rewire would have been a better way to go,but who am I.

4. Any plugin compensation solution available?

5. If rewire is out of the question, how are the inter-audio transfer solutions? (Jack audio...I think one was called)

Could you list any other advances I might not know of.

respect Nappy
