to work flawlessly with an external WC on this rig. It's loaded with Win ME, the OS has been optimized and tweaked and can utilize IG of RAM on win 9x. This has been an extremely stable platform since I built it back in 2003 so you can drop it in a case and get going quick. I'll also label the Magma slots that I have the cards in and the mobo slot for the host card so you can just hook up the cables and your WC module. Of course, I will be available for phone support if you need help getting up and running and if you're not too far away, I might consider delivering it and setting it up for you.

Fi
