Subject: PARIS starts super-slow

Hi. I'm on Windows XP and PARIS was working fine until just a couple or so
months ago. Now when it starts up (or even if you just start a new project
when already in PARIS) it takes several minutes. The splash screen and the
start-up bits when you see the splash screen are fine. It's after the splash
screen finishes, and just as the Project window comes up; at that time, the
Project window just sits there, half-displaying (i.e., not all graphics show,
just a couple menu options and a blank window) for several minutes. Then
finally it comes up fine. I have tried disabling all plugins, that has had
no effect. The hardware seems all to be fine. Once up, PARIS works just
fine, no other anomalies. Any ideas? Thanks much.
