UAD-1 cards
running in this chassis without IRQ trainwrecks.

I know most of the Paris community is still running on PCI based mobos and this rig will likely work great for your needs if you have a compatible mobo.....and speaking of compatible MOBOS.....

For an extra \$350.00 I'll throw in a Gigabyte GA-K8NS Ultra 939 mobo with an Opteron 185 CPU here and 2 x GB of Corsair XMS 3200 RAM. These have the NForce 3 chipset which was the best AMD based chipset ever produced as far as compatibility goes. This mobo will also run the Opteron 185 dual core which is a great CPU.

Lastly, I have two of the older Powercore PCI cards here. I successfully ran these in the Magma along with the UAD-1 cards using the original TC v1.5 software which includes their standard plugin package including a very nice 1176 emulaion and soe very nice reverbs and the X3 mastering package. \$150.00 each for these.

I figure \$800.00 plus shipping would cover the Magma/UAD-1 rig.
I'd also be willing to work out a package deal for the whole kit and kaboodle.
If you're interested in it, give me a call at 970-769-0488 or shoot me an "E" at animix@animas.net. The cards are \$200 each or \$350 for both. The Magma is branded Digi

but was
made by Magma. I am running 3 UAD-1 cards in it fine right now. \$200.
