OK so I haven't used PARIS for a long time and when I did it was on a Mac. I've recently purchased another PARIS system and will be running it on an 866mhz Pentium III. Pretty ancient huh, but I figure it will be fine for my modest home use. My ? what apps do I need to run VST plugs, and how do I do this. Be gentle as I'm IBM stupid. Also what is the best configuration for what I have. I have 512 Meg of Ram by the way. I am up and running on windows XP except for the dreaded pallett assertion failure at close. I am running my own skins so maybe that's it, don't know for sure. All else seems good. Also after the above help hao do I run Chucks plugs. Anything else you can think of to help me poease feel free/ Thanks in advance Jim
