The new skins are up on the WIKI. Here are the revised instructions for replacing PARIS bmps with the new ones. They can still be replaced the old way but the MIXER bmp cannot be replaced the old way and the new program is much easier. So here goes.

1. Download and install Resource Tuner from here.

  http://www.heaventools.com/rt-how-to-change-icon-in-exe-file .htm

     also download and unzip the skins file that you want to install, for ease I just put them in a folder on my desktop with the name of the skin group.

2.   Make a copy of your PARIS EXE. Leave it in the folder it's in.

3.   Start Resource Tuner and open the copy of your PARIS EXE in it. To do this click the folder icon in the upper left hand corner browse to your PARIS PRO folder and double click the copy of PARIS exe.

4.   A list of folders will show up, open the one that says PICT. This folder contains all of PARIS's bmps.

5.   Double click on the name of one of the bmps, say MIXERFADERPAN, when you do it will open in a window with another window beside it that has a ? and says replacement file. In the upper left hand corner is a folder icon click it and browse to the folder that has your new skin bmps and double click on the one with the same name and it will open in the second window. Select OK and move on to the next bmp. It literally take minutes to replace the bmps, much faster than the old way.

6.   When you are done save it with a new name say PARIS_BRONZE.exe in the same folder as the original PARIS exe, and the copy exe. If all was done right when you double click this new exe file, PARIS will open with your new skin.

Resource Tuner is free for 30 days then you must buy it, it is 39.00. I would recommend downloading all of the new skins that you want and creating the new exe files with them while it is free. Remember all the exe's need to be left in your primary PARIS PRO folder, I then put shortcuts to each of them on my desktop and then can simply open PARIS in any skin I want very easily. With this new editor the MIXER bmp can be replaced with no ill effect. With the old editor replacing this bmp caused PARIS to crash on closing. I have replaced literally 100's of bmps while adjusting button placement with virtually no issues.
