Well, the other day I was bitching about how I couldn't route my click in Cubase 4 to a separate bus. Now I can't even hear it on the main bus. It's enabled, it's just not working.

any suggestions?

You might try asking in the Cubase forum. Did you check VST connections and the Transport (F2) / Ctrl click Metronome ?

Buy a console... ;-)

David.

I can't afford one right now or I would. I swear, the click track jus

totally quit working. Everything is set up normally. It just doesn't make a sound.

I had a similar instance on a project . spent hours looking for it. opened another default project and it magically reappeared.I think its a random bug.

drove me nuts. as im sure it is with you.unless we are both retarded!

A random bug called "sometimers"... ;-)

David.
