Hello all, I am trying to figure out how to get pt8 to slave to Paris. I have the midi file installed that mike sent me and have done everything in the project window. I think that the issue is with pt. If anyone has this setup and can give some input I would appreciate so much. I did not know that when I purchased the mbox2 that I could not use any other recording application. Should I just try and send the mbox back to sweetwater for a different one now and go to reaper?

Thanks
David

Mike has a new ASIO driver that allows you to use another app i.e. Reaper with Pars' hardware.

It's in beta stages right now and does appear to work well albeit a tad sluggish, for playback unfortunately I can't comment about it's recording capabilities.

Like in a newer copy than the one from a couple years ago....I could always get that one to work with 2 is/outs? Might have to send him an email if that is the case? Mike?
