I got things really cooking here with my new rig except the
Creamware folks are on vacation from today until 1/2/07.=20
I picked a great day to install the Pro card . . .

Hurry up and wait.

Now, Cubase 4 ? ? ? Should I wait?

Naw, well maybe . . .

NOT!

I choose Polesoft Lockspam to fight spam, and you?

Exactly. No allkeys.skf

1/2/07 unless there's an automated way to get them.

"Neil" <IOUOI@OIU.com> wrote in message news:458d4771\$1@linux...

I'm sure it's that he can't get the "allkeys" file.

Tom, did you e-mail Ali? (info@creamware.com) & give him your card's SN#?

Nope, no automated way that I'm aware of.

I think they should e-mail those out the moment you place your order - it's not like you can use them without the card!

Anyway, if you REALLLLY want to try the card out, you can always enter the keys manually... they're located inside the front cover of the "manual". It'll take you at least a half-hour & I got it wrong because at least a couple of the module names don't match what the software calls them, so it's confusing & you have to take a guess... I guessed wrong.

Or maybe DeeJ could send you a copy of one of HIS allkeys files from his Pro Cards & you could see if it works on yours! lol

Me, I'm going to be taking the Pulsar Project card out of my Cubase rig today & installing it in my Paris PC to see if I can get it to clock properly at 88.2k if it's in a different PC than my RME cards, and then run some summing tests (that Lamont can scorn for being "rigged" LOL!) to see if summing 4x stereo

sumbixes out of my Multifaces via lightpipe will make any kind of difference vs. summing in Paris with the same # of sumbmixes via analog outs into the Paris 8-in module. Of course, my two current lightpipe "cables" are not long enough to reach, so I'll need to go down to my local Guitar Center & see if they have anything long enough (and if they do, am I going to have to toss out 30 bucks per cable for the Monster lightpipe ones they seem to favor - GEE, WONDER WHY? - or if they have something more reasonably-priced... oh well). And then the question becomes: can I run the Pulsar stuff as a stand-alone app on that PC, or will I have to install the CubaseLE software that I got with a Lexicon Alpha interface, which I bought solely for the Lexicon Pantheon reverb that came bundled with it? And if I DO need to install that, will it work on WinME (which is what my Paris PC is running)?

OMIGOD, I just scared the shit out of myself... that looks EXACTLY like somethng DeeJ would post!

lol!

>am I going to have to

toss out 30 bucks per cable for the Monster lightpipe ones they

seem to favor - GEE, WONDER WHY? <

Radio Schuck may have RCA-F>BNC-M adapters. If you've got a s/pdif cable that is long enough, this will do the job.

voice of experience

I would gladly e-mail Tom my allkeys file but it's not for a pro card. I've got 2 x project cards and a "home" card right now.....;o(

Ohhhhhh!!!! Sorry. I was thinking WC. I have used the cheapo HOSA cables with mine. They actually were more secure because they didn't have that big adapter on the end that overlaps the brackets on the PCI slots.

worked just fine.

;o)

No, Deej, I'm going to send the audio out through Lightpipe - 4 channels per Multiface (2 stereo submixes out of each Multiface's lightpipe "out", into each of the two lightpipe "in's" on the Pulsar card).

Rat Shack's here are carrying Monster digilight cables now, too... profit margin must be just a LITTLE bit bigger on a \$30 cable than on a \$5 one :D may as well go to Guitar Center & see if they have anything else at a lower price point (plus, check & see if they got anything new in stock that my gear sluttery just can't resist LOL!)

Just got back from G.C. - got the "Live Wires" ones, which were still 30 bucks for the length I needed, but are a little more robust than the flimsy ones for not all that much less \$.

Hey Neil,
I finally got ADATs, XTC and MIDI functioning (no crashes)
with Scope not even running. That's step one for my implementation
of the hardware. Once all was set the XTC seemed to be like a regular
VST plugin. It has become RME plus. Once I get this into the
control room I'll listen to the audio and really put it through some =
paces.

I am getting closer and closer. Thanks for the help!
Tom
