The project I had in an earlier thread is now done. Thank you Mike A. for spending some of your precious time helping an OS challenged person I truly appreciate it. Everything seems to be working great. I'm running Windows 7 32 on a dual core CPU. I'm far from a power user but this setup gives me room for 2 EDS cards and 2 MEC modules. I currently don't have any modules like I said I'm fffaaarr from a power user. Here's a couple of pics the savings in room is awesome in my situation..
