I've seen in the news that Myspace has aquired some anti-copyright technology of Gracenote to stop people uploading unauthorised material. Anybody know how it works?

The reason I ask is that I just tried to upload a song I wrote last night and it's claiming it's a copyrighted peice, and yet I know I wrote it, and would be quite astounded if anybody else had written the same peice.

Yes it borrows some ideas from Radiohead timing wise, but the timing is definably different from the Radiohead song from which it was inspired, and the chord progression, melody etc are totally different. I don't see especially how any electronicly based monitoring system would pick a minor thing like that up...?

I'm thinking they're still tweaking the system...

Cheers,  
Kim.

I am assuming that you tried to upload an MP3 file. When you created it, you may have selected the copyright bit flag (wavelab has this).

David.

Interesting. It was an MP3 created in Wavelab, however it used exactly the same method as all the previous MP3's that I have successfully uploaded. Indeed I later uploaded a tune using the same method... so it seems unlikely, though worth checking for sure.

Cheers,  
Kim.

Ok Kim, you bring up an important subject,  
We should all be myspace buds,,,  
let's list and join..  
There is power in #'s eh?

my band;  
<http://myspace.com/theblizzardof78>

I'm pretty sure Gracernote doesn't actually examine the musical content of  
the song, it just takes a hash of the file itself and compares it to a

database of known songs. You know how sometimes if you rip a CD and try to get the id3 songs from cddb it will give you several options? I'm not 100% sure but I think that's what's happening. I'd recommend adding a couple seconds of silence to the end of the track, reencode your mp3 and then reupload....

OK, that sounds plausible.

I have a new mix now so I'll try adding it again.

Thanks just-cron.

Cheers,  
Kim.
