I suddenly started having problems with PARIS opening. It has worked fine for years, but now, all other programs on my computer opens except Paris. I deleted the paris.cgi file, then copied the paris.cgi backup file and saved it as paris.cgi and it worked. (I found this technique on the 3.0 CD ROM.) I shut down the computer and tried again the next morning and it stopped working again. I repeated the same procedure above and nothing. Anyone have any tips on how to get this problem resolved? I'm using version 3.0 on Windows XP. I have not changed anything outside of the basic system and so I'm using only 1 card and 1 MEC.
