Subject: SPDIF - am I nuts?

For some reason, I'm not able to get the SPDIF working as I thought it should. This is both with the stock studio control library and Mike's newer test versions.

Anyway, I have a video component cable - high quality 75 ohm cable. I've basically created a loop by hooking it from SPDIF out to SPDIF in. Cable is 3 ft. long.

In the pathbay, I've set an external native insert on a pair of channels, then in the patch bay hooked the inserts up to dL and dR pairs. No audio gets passed through.

If I do the same thing with normal analog I/O, it works fine.

Ultimately, I'm trying to slave a FW410 interface to work with Reaper and would like to use the PARIS A/D for capture, passing it back to Reaper digitally.

I'm all ears for ideas here. Thanks!

Oh yeah, this is on XP dual core Athlon64 system.
