Hi Brandon,
These work great.

All,

I need suggestions on taking a regular IDE hardrive and converting it to
a hot-swappable USB drive for storage use.
There is so many kits and such to do this I cant decide.
Has anyone doe this?
What did you use and what is your experience?
I have teo dives to convert.

I would rather not have a bunch of wires involved but if it is necessary
ok.
Looking for a good cheap but quality medium point.

THANKS,
b

Thanks guys.

I will just go with the cheapo and see how it works. Since all I need is IDE capability right now that should work for me. Came out to under \$13 on Ebay for the one Dimitrios linked to.

Actually it came out to under \$11.
with shipping included.
