Anybody notice that www.intDevices.com has updated their site.

pro audio is "coming soon" with a PARIS screen shot.

anybody hear what they're up to?

Perhaps releasing a software only version?

Even if they are, would it be useful for anyone other than someone who already owns PARIS hardware and wants to edit on their laptop?

If we threaten to sue them now maybe we can stop this from happening.

Just as an aside, have a look down the bottom of the site at the site designers, and go to that site and open it up in Flash.

Pretty good.

Nothing is coming "soon". I'd bet my next ten paychecks on it.

Yes! It is! Very cool! And if they had dedicated as much time
to audio development they could've had a new DAW by now!

Nothing is coming "soon".

It just says their pro audio web site is coming soon. That probably means they are just going to sell their forensic audio tools and other stuff there.
Remember, remember, remember, even when they were doing work it was incredibly, incredibly slow and many "soon" promises were made that turned into years and also never materialized. Don't start any excitement over such non-information.
If Edmund is behind it, I'm not.

Paychecks?? We don't need no STEENKING paychecks!

As far as new Paris goes, I think it is a great time to introduce something different in the DAW world, and I think we should give them a break until we see the goods.

I agree... to a certain extent. There are many new things in the DAW world, but nothing like Paris (unless you have a Sony bank account). Everything these companies are focusing on are small DAWs... plug in a guitar and a mic... screw the rest of the band having their own inputs. It's like they moved back to the 8 track world and they are stuck there! Release some hardware that is like Paris... an awesome PCI card that will interface to an expandable item like the MEC so I can expand and upgrade it... There isn't anything out there that is like Paris that is reasonable...

I have my doubts that ID has been working on PARIS, but I would welcome any up date from ID. If it's a completely different product it would have to be as revolutionary now, as Paris was in 1997 for me to pay attention.

For the sake of the people that are still invested in Paris, please don't be insulting or threatening even if your just joking. This could stop any release.

Companies do things for MONEY James, not because they're nice or feel good it. If ID is working on PARIS some (well deserved) ribbing on this barely visited newsgroup will not change what they're doing.

Yes Thad your right, but your also making some assumptions. Let's just give them a break for now and see what comes of this.

This may be the reason ID was not interested in selling Paris.

I guess I'm still a bit PO'ed about how this all went down many years ago. I thought it was very counterproductive to attack ID when they had the props knocked out from under them by the whole Creative/Emu debacle. (my opinion - I respect the opinion of others so let'n not argue about it, OK?) I agree that leaving this subject alone is the best thing to do, no matter what the feelings were back then on either side of this debate and I was sorry I popped off about the minute I hit the "enter" key on my computer to send the message.

Let's see what develops and keep an open mind. The past is past. Anything that comes to pass at this point should be interesting and (from my perspective) welcome. I'm deeply invested in Cubase at this point and for the most part, I'm pretty satisfied with it's functionality and workflow. I've got a buttload of time and \$\$ invested in trying to get "that sound" out of it so if ID does release something that is capable of creating the

Paris experience in a native format, that will be interesting to explore it a perhaps a welcome alternative for me.

My bad on bringing up old crap.

Based on the "support" ID have given Paris (a product that they are still selling) I would not invest \$0.10 in a new product from them regardless of how earth-shattering it was. I said as much on this group years ago when Edmund was still around, and I still feel the same way. They would have to do a *LOT* to earn my trust again.

David.

Maybe they're finally fixing the broken and incomplete MIDI implementation.

Cheers,

-Jamie

Speculating here, but I seems to remember ID had a native Paris-program and some other things in the pocket years ago, as far as I could understand Edmund and SCC's was writing here between the lines in those days. I think Edmund too must have had good times to speculate more with these things;-)

It is possible that the death of SSC may have made work on a new DAW product possible, or that enough time has past to make non-compete contractual agreements void. Edmund might have done a bunch of work after 3.0 and then been unable to sell it. Who knows?

You may be onto something there LaMont. Releasing native versions of the software seems possible. The software side was ID's realm.

Any non-compete agreements may be about to expire with Creative.

With today's native hardware speeds, the fast PARIS hardware that offloaded DSP processing from the computer's CPU may be somewhat superfluous.

The PARIS software could rock on an octo-core box.

Things they could do include lifting the old hardware-bound 16 channel limit, and finishing/fixing the MIDI implementation.

Cheers,
-Jamie

That's harsh.. I'd welcome something new from ID. Paris was still in it's infancy when they pulled the plug.

I remember Edmund showing me a "working" version of Paris "Native" on Mac OS back in 2000 NAMM. I mean it was working really good.

So, to have a native VST version of Paris that specialize in Tracking, routing, mixing would be great. Forget about the midi sequencer, vsti's..

Well??? If he had all that working , then okay..
I hold any ill feelings to ID what so ever. Only to Creative and EMU.

Even more, I stated back in 2000-2002 that EMU made a very bad strategic move when it pour most of it's resources into ROMplers. Most of them bombed, saved for the Planet Phatt module. Now look at them. Can't give away the samples for their softsampler. And, to this day, their Audio cards still suffer from "just okay" drivers..

A native version would be the next logical step but it would be so archaic compared to Reaper, Cubase and others it would hardly be worth the trouble.

I seem to recall one time on one of the Sunday night chats when
Edmund showed up - everyone said hi & he started off his
conversation something like this: "Guess what I'm doing?"
everyone goes "what?", he says: "I'm sitting here running Paris
on my laptop", everyone says "what?" "huh?" "whazzat you say?"
Someone pipes up: "You mean like a NATIVE version of Paris???"
And Ed was very coy - he wouldn't say if it was or it wasn't.

So... who knows?

<begin wishful thinking>

If it sounded like Paris, but worked like SX, I would consider
giving it a try, depending on pricing, etc.

</end wishful thinking>

Neil

I do. Shhhh...

I SAW and played with it. SSC took me aside at
NAMM and showed it to me. It's very real.

Since then, who knows where they have taken it?

I'm a capitalist, and I have a hard time a product that has been essentially
dormant for five years could possibly compete with products that have been
out there in the marketplace fighting with each other. I'm happy to look
at anything to see if it's a better mousetrap, but I can't imagine I'll prefer
it to my Live/SX combo rig that I'm running now.

Yes, but what if he has been working on it all this time at his own pace?

Damn, I hope he got rid of the Pace!

As I believe, there was a version that ran QuickTime, a version that ran native, and a version that ran on OSX. I hope it will still run on the old hardware, I have a lot invested, and I think it still sounds good. In the past they said they were looking at different hardware. I would also like to have a native version for location recording with a lap top. I also hope it has modern DAW features like delay compensation, but I have my doubts that any thing is coming for PARIS.

It is pure speculation, but I think the statutes of limitation, seven years, would be up in November or January, but I could be off by a year. Time will tell.

Native submixes in 3.0 sounded nothing like hardware submixes... though
you never know. Maybe if ID hired the Ensoniq code team you might have
something. I'm not holding my breath.

That's a powerful combo Thad(LIVE & SX), but an updated Paris for Mix and Recording Engineers is very much welcomed.

Not everyone wanted not need all of the goodies in SX. When it comes time to mix the \$\$ jobs, Paris & Pro Tools are no#1 in my book. Notice that I did not say editing.. That dubious spot belongs to SX/Nuendo hands down..

So, if an updated Paris did not have a midi sequencer, vsti hostingBut HAD: Total Delay coompensation, even more flexible patchbay routing, and proper Asio2 plugin handling..Wow!!

Yes, but what if the editing shows up as good or better? Hee hee hee ;
) It's all speculation. What if Edmund has been working on Logic for Apple
all this time??? Some of those feature concepts look familiar! We could
speculate all day;)

It's always fun to dream. What would be on your wish list?

Agreed, LaMont, it would fill a niche, but still just a niche. But hey, I hope you guys wind up with it if that's what you want.

TCB

If this does come to pass, I'd lay odds that it absolutely screams on Mac OSX. Ed and SSC were both Macfolk.
