Anyone using a 1616 or 1616M as a portable recording solution? If so what do you think, and what speed laptop are you using? Units have received great reviews (EM etc) but it's E-mu so something just does not sit right.

Spec's state the card has DSP and I think someone was raving about the converters at one point here awhile back.

I'm looking for an inexpensive portable solution to add to my Paris system not replace.

Or

Is the Hamerfall RME DSP mutliface a better solution or?? Thanks again for any and all help!!

Rich,

My Emu 0404 card is a delight, I've never had a problem.
