I have a bunch of sessions that I recorded in Paris that I want to work on in Pro Tools LE. Is there an easy (OK- relatively) easy way to convert the .paf-.wav, and/or the actual sessions? Thanks! -Jim Rosenthal, Dallas, TX (past Ensoniq and EMU rep)

Hi Jim.

Firstly, do a search for the Paf - wav converter, (someone on the NG may have it), and do a batch convert.

Then you need to bounce each of the tracks from zero to individual files.

Then you can open a PT session and lay the files from zero and it should all line up perfectly.

Best of luck.

Martin H

FWIW, I have both versions of PAFWAVCONVERT (one that works on 98/ME and one that works on WINXP), so Jim, if you need them, send me an e-mail at:

neil DOT henderson AT sbcglobal DOT net, and i'll send them to you, no problem, since they were both free releases.

Neil

If you have Paris3, you can do these things inside the program with  
"Render track to disk" and then export the fie(s) as "Audio object" or  
"Stereo file" in wave format.

That is the easiest way to go. Select all tracks then render to disk, then  
export. I don't know of anything else that will capture all the edits, and  
there's no way I know of to get the actual project to the PT platform
