> Is it long to set a mix from EDS to virtual and update it ?

Yes. That's why most folks use multiple card systems.

> does most paris user have succesfully migrate to XP ?

I don't know. XP has advantages and disadvantages. If you are needing to use native plugins that won't work in Win 9x, then XP is an advantage. I think there is a bit of a difference in the sound of Paris when running on XP. It doesn't sound bad, just a little different. XP is a more stable OS than Win 9x overall so that is an advantage sometimes, though not an issue for me personally.

OTOH, if you are needing a larger system with more than one ADAT module per MEC, forget using XP. It is very difficult (I won't say impossible) to get more than one ADAT module per MEC to work.

Deej

Hello,

i'm waiting for my first paris (such a strange idee in 2006...), and study the docs.

i wonder if it's usable when using virtual mixes as subgroups : working on one submix, swap on an other so on , and mixdown with the master mixer.... with only one EDS.

Is it long to set a mix from EDS to virtual and update it ?

does most paris user have succesfully migrate to XP ?

thanks

well done rick.
thanks all for the welcome and your inputs (so i'll looking for 2 other EDS)
i just bet on "the la large sweetspot before clipping and good converters"
paris seem to provide..for cheap now.
