Hello all, I have a problem I haven't experienced before.

I have a fresh install of 3.0 on a new XP machine, single core but with Mr. Audits new drivers.

Paris will boot and I can load in

projects and audio, however no response at all, I get all windows, but no playback, no C16 action, just dead, it won't respond in any way, I haven't found any info in the forum with the same issue.

All lights blink as if it wants to work properly, card shows up,

Mec blinks, looks like it should work, I'm scratching my head?

Any ideas? Thanks much, Johnny
