Just bought Mike's reverbs, trying to get them installed. There's something missing from the text, it seems. I think the red x's should be the blue text, copied and pasted, right?

Here's the install instructions:

Installing plugins on windows 98/ME:

Copy the dll and ini files to C:\WINDOWS\SYSTEM\Ensoniq\PlugIns

Installing plugins on Windows XP:

1) Copy the dll and ini files to C:\WINDOWS\system32\Ensoniq\PlugIns
2) Add the path to the plugins to the system path.

Right click on "My Computer" and select "Properties"
Go to the advanced tab, and click on "Environment Variables"
Find the variable called "Path" in the "System Variables" box and double click on it.
Type a semicolon at the end of the list in the box that appears, and then paste in the path to the plugins folder, like so: XXXXXXXXXXXXXXX
Click OK, and another OK, and start up PARIS!

Well, I went ahead and put that path in place, and got this error message upon Paris start-up:

"This application has failed to start because StockFx.dll was not found. Re-installing the application may fix this problem."

Thing is,after x-ing out the four repeated error screens, Paris started right up, and all the Paris plugins, new and old, seem to be present. I didn't stress-test things, but any advice is appreciated.

Haven't heard back from Mike yet...
