Subject: No mo' Matrox pour moi.....
Posted by animix on Wed, 11 Oct 2006 22:20:58 GMT

I finally ditched my last Matrox video cards on my DAWs. Upgraded to NVidia
GEForce 5500 dual heads on everything now. It's nice having 128MB vRAM per
head and stable drivers. Those old 32MB per head G450's were dogass slow by
comparison and the Nvidia drivers feel much more stable than the Matrox
drivers ever did.

Deej

Deej,
Lamont has suggested the UAD-1 plugs and Waves SSL plugs
will work much better with the shnazzier video card. I'm thinking
of tan upgrade also. Did your IRQs change with the video card
swap?

Not the UAD plugs. The UAD PCI card is a Video Card per se.. I say that you
will get better performance with the SSL bundle with a better video card

Deej, did you find PCI and AGP versions? If so, lead me on bro, my old
matrox cards have ticked me off for the last time if I can find a testament
like the one I think this is.

AAron...here's where I got mine:

 http://search.stores.ebay.com/ImageStore_v29_W0QQfcdZ2QQfciZ 9QQfclZ4QQfromZR
10QQfsnZImageStoreQQfsooZ1QQfsopZ1QQsaselZ32437342QQsofpZ0

 http://www.fookstore.com/ProductDetails.asp?ProductCode=Fook %2DV008

These cards are sweet. Be sure to install the AGP card and load the (most
recent NVidia unified) driver for it first. Then install the PCI card. It
will use the same driver. In my usual fashion, I just crammed both cards in
the mobo, fired her up and the PCI card loaded but the AGP card wouldn't
load so I uninstalled the drivers, then behaved as a sane, logical person
would, and it worked quite nicely.

What is cool about this is when I drag the mouse across my screens or

---

dragging windows around dring playback, I get nothing like the major CPU hit
that I got with the screens that were running on the G450 PCI card. With the
old Matrox cards, the minute the mouse touched the GUI running on the PCI
card there was a momentary spike and dragging a large window during playback
could cause a farily serious surge, enough to worry about in a heavy
session.

DJ
If you have any extra CPU cycles in that Geforce, you might want to check
this out.

Deej, did both those vid cards come capable of all VGA output by chance (preferrably
no DVI to VGA adaptors)? My antiquated Paris rig needs VGA only, heh.. what
a surprise, 'eh?

I picked up two DVI/VGA adapters. They did not come with the cards. Also,
I've been testing some screen drags with big windows today. I'm getting 100%
CPU spikes on the PCI card when dragging a full sized mixer window at 1200 x
1600 resolution (dammit!!! ;o(. This is sorta disappointing, but hey,
overall performance otherwiae, as in general stability of the driver, is
much, much improved. I'll be blaying around with my color settings and
performance settings to see if I can mitigate this some. I've conditioned
myself to be careful about screen dragging during tracking anyway, but in a
perfect world...........maybe something like a Colorgraphics Predator Pro
AGP? Not a lot of VRam on one of those and I'm not sure about the drivers
either....especially for win 9x.

Deej,

Macro Express has prevented the need for screen drags for me.

Are you using that? It's worth it's weight in gold.

I've never taken the time to figure out how to use it. Will it =
intimidate me and make me feel inferior and "wusslike"?

 "Tom Bruhl" <arpegio@comcast.net> wrote in message =
news:452e86ef$1@linux...
 Deej,
 Macro Express has prevented the need for screen drags for me.
 Are you using that? It's worth it's weight in gold.
 Tom
  "DJ" <notachance@net.net> wrote in message news:452e7f0a@linux...
  I picked up two DVI/VGA adapters. They did not come with the cards. =
Also,
  I've been testing some screen drags with big windows today. I'm =
getting 100%
  CPU spikes on the PCI card when dragging a full sized mixer window =
at 1200 x
  1600 resolution (dammit!!! ;o(. This is sorta disappointing, but =
hey,
  overall performance otherwiae, as in general stability of the =
driver, is
  much, much improved. I'll be blaying around with my color settings =
and
  performance settings to see if I can mitigate this some. I've =

conditioned
   myself to be careful about screen dragging during tracking anyway, =
but in a
   perfect world...........maybe something like a Colorgraphics =
Predator Pro
   AGP? Not a lot of VRam on one of those and I'm not sure about the =
drivers
   either....especially for win 9x.
