I've been using Innotek's VirtualBox for a couple of weeks now and have decided it's ready for prime time. For those of you running an audio box where you would like to be able to do some general tasks, writing emails, documents, web surfing, etc., it's a great way to manage things. Your audio install can be completely static while your 'alternate' VM can be whatever you want. For me, it's Debian so I can write code and such, but if you wanted you could even install some awful version of Windows.

Very cool, and I'm posting this from my new audio laptop running a Debian VM,

TCB
