All,

I know a few of you have made your own computer enclosures with soundproofing design to quiet the control room.

Do any of you still have the plans you used?

I am interested to see your designs and hear from you how they worked. I am fixing to build a new control room desk and was going to incorporate a computer enclosure in the bottom of it.

Thanks,

Brandon

I never found a good enclosure so my pc is on the other side of two walls 10" apart with 2 sheets of drywall on the outside of each wall. This is totally silent. And the MEC is on a 20' SCSI cable. I would love a SILENT enclosure.

Check the link below, and look for Furniture, "Chris Wargo's computer isolation box"

<http://webnews.parisnewsgroup.com/>

Good luck!  
James

I use a Dell at work that is unbelievably quiet.

First, if you check out <http://www.quietpcusa.com/> and their intro page

[http://www.quietpcusa.com/articles/how\\_to\\_silence\\_a\\_computer.html](http://www.quietpcusa.com/articles/how_to_silence_a_computer.html)

doing nothing more than half of what's on that page will help a lot. It won't make something silent but it will be awfully close. For truly silent computing I recommend a Cat5 KVM box. This one is a hardware unit for under \$900

<http://www.42u.com/raritan-kx101.htm>

and they can be had for a good bit less, this just happens to be the brand we use where I work.

Thanks Guys!!!

I will let you know how it comes out.
