I don't know what part you'd replace that with - someone with a broken C16 out there want to take it apart and see what it is? But I do know that C16s are about \$50 now, with some people just giving them away on occasion, so it's probably going to be cheap enough to just source a replacement on the classifieds.

Oh, my bad - I saw "MEC" but I was thinking C16, so that wasn't particularly helpful advice . That's actually probably going to be much easier to solve since there are so many MECs out there gathering dust; anyone got a broken one that they can cannibalize a volume pot from?

@laurent,

every Analog pot has got the Ohm-Range at backside. U can buy new ones of your needs, in partshop around the world. If you don't know how much Ohm you that damegeg one has got, get a Ohm leveler and try to turn the Poti clockwise till the end. Then you can read out on leveler, how many Ohm it has got.

Viva la revolution ! Hope thats right

I'd call The at TheSoniq.

<http://www.thesoniq.com/>

He's the only Ensoniq PARIS repair guy on earth, as far as I know.

All the best,

Mike
