hello -

so - i took the plunge. bought an eds and a mec. borrowed an xp machine and purchased the scherzo drivers.

eds card is seated in PCI slot 3.
new hardware was found by winxp
scherzo driver was installed per instructions, and succeeded
paris was installed (using 2.1)

mec is on and connected to eds via scsi 2 cable.

I run paris and blam! - "Error Initializing Paris Engine. Error code 1/1"

Unhandled exception c0000005
At address: 00378007

This is bringing back bad memories of an experience i had with a faulty EDS card.

is there a troubleshooting FAQ where i might try and diagnose this?

anyone know of an obvious causes?
