Did you try moving the MEC or "A" interfaces to the other EDS card? I'd recommend trying that.

Hi everyone,  
I'm hoping that possibly some of you will be able to help me figure out what  
I am doing wrong here. I just recently purchased 2 extra EDS-100 cards and  
am working on upgrading my Paris system to a 3 card system. The 2 cards  
came with the ribbon cables to connect them together and I had a local company  
make me an extra 16-pin and 1-pin cable to connect the first one up to them.  
I switched around a bunch of PCI cards in my computer and plugged all the  
cards in, using the daisy-chain methodology described in the manual.

For 16-pin connectors:  
Top left to middle right  
Middle left to bottom right  
Bottom left to top right

For 10-pin connectors:  
Top right to middle right  
Middle left to bottom left

Everything boots up just fine, but when I go to start up Paris, it runs and  
then give me an error message that I don't have the master EDS card hooked  
up to my hardware (my hardware is an MEC) and that I should check my connection.  
The connection seems to be working as the lights on my MEC seem to blink  
on and off when I plug it in. I have gotten this exact same error message  
from Paris 2.2 and Paris 3.0.

Here are a few ideas that are making me scratch my head:

1. The manual mentions synching my EDS cards via BNC cables, but I can't seem to find any BNC connectors on the EDS cards. So I don't really know what they're talking about there.

2. When I upgraded my EDS cards I also added extra input and output modules to my MEC. I don't know if this has any bearing on the problem that I'm having.

I feel like the most likely problem that I'm having is that I've done something wrong with the way I've inter-connected my EDS cards, but I really have no idea and I don't know anyone nearby here in San Diego who has any sort of expertise with these systems. If any of you guys have any sort of feedback or ideas for me, please let me know. I'll be forever grateful.

Thanks,  
David

Hi David,

You need to follow the instructions in the manual to ID your "Master" card. This involves plugging the MEC in to each card to get the ID and quite a few power cycles on your computer. The cards will be ID's in PARIS as "A", "B", and "C".

This is covered in the PARIS 3.0 manual.

Let me know if you need more info.

Mark

Thanks so much Mark. That seems to have done the trick. It's funny how they forgot to mention the ID issue in the Paris 2 manual. Now if only Intelligent Devices will email me my authorization code.  
the best,  
David
