According to BrianT this is a must have for Paris.
I bought one and there is another up for auction.
Would not get over 50-60 \$ so its a bargain !!
What will this do for Paris ?
It will connect your Mec's analog ins and outs summing them to a common output
!
I bought this to connect for my three mecs the 20bit ins and outs to either
monitor for headphones or (my situation) be able to patch a Lexicon LXP-1
and LXP-5 (Jim Williams mods) so to be able to have these on every mec on
same auxilliary !!
Hope this helps.
regards,
Dimitrios
