This did work at one time, back when I only had 1 MEC. Haven't used it a long time, tried it tonight and no go, tried my second MEC still no go. Tried to toggle the main/monitor switch on the MECs, checked my cans elsewhere, they work fine. Anyone else have this issue on a 2 card, 2 MEC sys? Is this somekind of funky Paris limitation? Is it possible that I fried these outputs somewhere along the way? Other than this, the MECs work fine.

Thanks

Rob
