Hi,

I fear the answer is no, but has anyone been able to use the C-16 with anything that's not Paris? It's a great control surface (apart from the lack of motorised faders), and if I move away I'm REALLY going to miss that weighted jog shuttle wheel!

Any inexpensive alternative? I already have a 16 channel Kenton Control Freak (MIDI controller with 16 x 60mm faders, and some programmable buttons and a data scroller), but a jog shuttle wheel would be sweet. Any other thoughts? I'm using Cubase SX 3 (and may go to 4).

Cheers,  
Dan
