"I wanna build some small pc's with DSPFX isa audio cards as standalone processors."

What ISA DSPFX cards your refering to??

These were some isa audio dsp cards first of their kind that had great reverb
comparable to Lexicon PCM-90.
They have also great pitch effect which sound fantastic like evntide and
very warm chorus-flanger.
You can have only one effect at a time but you could have as many isa ports
your motherboard have isa cards !
I am building mine with ,now, two dspfx cards , but will buy the other two
too...
So one processor with four effects at a time with 8 inputs and 8 outputs...
Thanks DJ.

I've been using their plugs for years and they really are pretty
outstanding. For example, the Optimizer mastering limiter was the best I
had heard in a plug until the UAD limiter, which does beat it.

For some reason they never added anything or changed their interface for
the past several years. They are DX plugs.

Alwo, the StudioVerb is not ported to the ISA card.....only the NaturalVerb,
which is good, but it ain't the equivalent of a PCM 90.
