
Subject: "Celtic Woman" PBS - 4060

Posted by [gene lennon](#) on Sun, 11 Dec 2005 19:03:02 GMT

[View Forum Message](#) <> [Reply to Message](#)

It implies your mic inventory since you can

> use the same microphone element on a variety of RF body packs or XLR preamps.

>

> Three sensitivity levels are available: the DPA4060 (134-dB SPL peak); DPA4061

> (144-dB SPL peak); and DPA4062 (154-dB SPL peak). I was sent the most sensitive

> version (the DPA4060) and was unable to overload them with the instruments

> I tried. Really loud situations, however, might require the built-in padding

> of the 4061 or 4062. And for the cosmetically inclined, you can get them

> in black, beige, or white. A point that, while unimportant to most studios,

> is important for on-air talent (...lights, cameras, action!).

>

>

> I tried them on acoustic piano and guitar in the studio, and the sound

> was surprisingly natural considering the small element. But the DPA4060

got

> the MVT Award (Most Valuable Transducer) from me at a live/recording concert

> with Celtic musician Robin Bullock. The C-Ducer contact pickup in his Cittern

> (sort of a round-back, Celtic mandolin) went noisy without a spare in the

> house. We simply taped a DPA4060 near the sound hole, and the sound was

fantastic.

> There was plenty of gain before feedback, and none of the bass build-up

you

> can get with a cardioid mic. Plus, there was none of the brittle string

tone

> you often get with a contact pickup. In fact he liked it so much, I loaned

> him one to take next week on a quick Paris/Germany tour.

>

> The only thing that's needed to make the system complete is a good mounting

> system for instruments. For piano, a pair of soda straws make acceptable

> mini-booms, and some double-sided tape works for acoustic guitar, but these

> are jury-rigs at best that won't make it on the live stage. No, what's needed

> is a variety of clips and mini-booms that can be attached to violins, guitars,

> dulcimers, and banjos. Yes, these mics would be right at home with the Celtic

> and Bluegrass crowd if only there were a quick mounting system that didn't

> require duct tape.

>

> So if you like the sonic integrity of using B&K mics, but used to faint

at

> the price, try out the DPA4060's. They offer a champagne sound to those

on

> a beer budget. Bottom line: A real value, offering tremendous sonic bang

> for the buck.

>

>MANUFACTURER:

>DPA Microphones (formerly known as Bruel & Kjaer). Distributed by TGI North America, 300 Gage Avenue, Unit 1, Kitchner, Ontario, Canada N2M 2C8. Tel: >519-745-1158. Web: www.dpamicrophones.com

>APPLICATION:

>Miniature voice/performance microphones that also can be used for acoustic >instrument miking.

>SUMMARY:

>Brings legendary B&K sound within price range of every studio.

>STRENGTHS:

>Connection adapters allow mics to be used with a variety of RF body packs >or standard XLR inputs; different protection grids are supplied that provide >acoustical equalization for different mic positions on a performer.

>WEAKNESSES:

>No mounts supplied (please don't make me use duct tape again); omni pattern >only.

>

>

>

---=_linux439c6a03--http://www.geekspeakweekly.com/cowbell/Rendering works:
Under proper (read: in windows, this means no use of certain characters like
#%&*(!, etc...) naming conventions.
Only with native effects -DirectX or VST.
In stereo, only if you open the editor and drag a stereo pair - save the
preset you intend to use first.

Be sure that your crossfades are exact on both tracks of the stereo pair.
You can render the track, render to disk and render the section.

If you're using SPDIF, you want to put external inserts on the tracks you are going to render in a loopback and tap those loops into the next set of open channels on the same submix, then record to the open channels. This will include any effects, including VST, DX and EDS that are inserted before the external loop on the tracks to be rendered. BTW, you can also do this trick with adat ports and any analog I/O you have. Adat is typically my preferred method if I have a lot of tracks to render, and SPDIF if I want a 24 bit render clone.

I probably forgot some details in this but I'm pretty tied at the moment packing boxes to move into a new house :)

Voiceover, Doco work, and it never failed.

I could never understand why some couldn't get it to work properly.

I guess it's like some people can't get Paris to run on XP...To me, it was at it's best on XP.

Different strokes for different folks, I guess.

I've gotten with upright bass in a
jazz setting have included sticking an Earthwoks QTC1 up under
the bridge. The QTC1 is omni so you get bleed, but its jazz and
gives a nice woody sound. But then you have to make sure you get
the mic nice and snug so it doesn't slide in the foam or whatever
you wrap it in; and keep the cord out of the players way.
Seems like this could be a nice alternative (I just saw the pic
of it).

Since no one has successfully put the mics in order so far .

Listen to the files and guess which one is the Holy grail of mics - the U47 :)

[http://www.mercysakes.com/paris/Morgan%20Pettinato/Mic%20Con test/](http://www.mercysakes.com/paris/Morgan%20Pettinato/Mic%20Con%20test/)

Good Luck - Prizes will still stand !
info on my previous post (Listening challenge @ the File vault)

MorganLetsee.....over the last couple of days, while channel surfing, I've run across Dawn Of The Dead, Night Of The Living Dead, Day Of The Dead, Shawn Of The Dead and a very bizarre and disturbing flick called Resident Evil.

Is it just me or does this seem like some pretty bizarre and arguably inappropriate programming for the holiday season?.....then again....at least I'm not watching the 400754th rerun of It's a wonderful Life.....yet.

Maybe I'm just old and out of touch.

;oPAnd "Wolf Creek" releases Christmas day...

Eat your turkey and go watch a horror flick...great way to celebrate the birth of a savior.

:-)

>>> Hey all. I little while back my paris computer failed. I bought a new motherboard,
CPU and memory (Pent 4). After getting all back together, I noticed that
my computer was louder! So I researched and read some good reviews on teh
Antec Sonata. I bought one and anxiously transferred everything to the new
case. Got to the last component, the Paris EDS card and guess what? Yep,
it don't fit. Sheesh! There is an open area on the case's bottom slot to
allow the card, but my motherboard (Epox) is a small factor and only has
3 PCI slots and it don't go down that far.

Now I really love this case. It IS very quiet and I like how components are
installed easily. Internal drives are installed with rubber washers, etc.

So I want to definately keep this case... especially since I paid almost
a hundred for it!

My options: As most of you know there are a few external PCI boxes that
allow using PCI cards. But they are so expensive. I scratch my head why
they would charge double the cost of a bare bones computer for this... Anyway,
perhaps I found another alternative. As I stated, the EDS card would fit
in the bottom case lot, but wouldn't go into a motherboard PCI slot. I found
a company that sells PCI extenders. I wrote to them and STILL waiting for
their reply, but is anyone familiar with these products?

You can find Magma chassis' used for much less than this. the best place to fish around for one is on the digidesign User's forum in the For Sale area. Those poor guys have to upgrade their hardware every 10 minutes or so and quite often they sell their 32 bit Magma's cheap. I got my 13 slot Magma there for \$250.00.
