I have an old JV1010 that I use with my Synthophone and I understand the only way to upload patches into the user bank is with some software that I can't seem to find anywhere. Is this true and does anyone know anything about this? If any of you have a copy of it could you shoot me up a copy of the file? Is there any other way to load patches into the user bank? This newsgroup is so full of tech and midi experts someone has to know something about this?

Appreciated,
Rich
