Subject: Error 12 ????

Hey guys,

can anyone remind me what error 12 is again. I remember reading about it, but don't remember.

I'm working on this song and it keeps crashing. Luckily I've had a couple copies saved so it's ok, but it's getting worse.

It won't let me loop and I have to keep dumping the undo cache, which I've never had to do before. I'm on a Mac, but don't really think it's an issue there.

Also, it does tell me I need to "allocate more memory" sometimes, but if I set my paris config too high, Paris won't open. The minimum Paris is using is 34000, so I set the highest number to 54000.

My Paris config is:

96

24

4096

If anyone has any suggestions I'd appreciate it.

Error type 12 is a Mac problem, but what is up with the looping deal.

It doesn't do it in every song just this one. I hit loop and it first say's not enough memory (which I have plenty of) then when I try to go further it crashes. I've reinstalled Paris, adjusted the memory allocation, kicked and screamed and yet nothing.

Maybe this is a sign I need to join the dark side and get Cubase. But, reading Doug's posts kind of scare me, so, I'm holding off as long as I can.
