Subject: Dimitrios - ADAT bug??
Posted by Sandy Tipping on Tue, 17 Apr 2007 04:37:28 GMT

This is a repost regarding your problem where 2 output channels don't work
on one of your ADAT cards.

Dimitrios,

I have this problem on some of my ADAT cards and I'm using WinME for my rig,
and I think I concluded it was a problem with the EDS card.
I have (1) loaded MEC (2 of everything). At one time, I used an ADAT loop
for realtime dumping of 8 tracks (8 insert sends to 8 new tracks, printed).
But 3 and 4 never worked. I swapped the EDS card that the MEC was connected
to (after swapping out the ADAT card twice) and things were healed.
Never bothered to do an exhaustive investigation - just chalked it up to
Paris weirdness.
Try a different EDS card in the same position on your mobo, connected to the
same MEC / ADAT combination. See if that does anything...

Sandy

Thanks Sandy !
As soon as I finish some projects will try switching cards...
Regards,
Dimitrios
