Is there any reason one would want to have both the 1073 and the 1081? Having
not used the hardware or the plugs, I am curious.

Thanks

> Is there any reason one would want to

Because they exist?.................well, actually, the 1081 has more bands
to work with, and maybe they emulated the class A/B circuit in the 1081, or
maybe they emulated a 1081 that had been modified from a class A/B to a
class A circuit, or maybe they modelled the Wujnderaudio PEQ module that
emulates the 1081 or.........or.......or...........

errrr...........I'm sorta having a hard time justifying this one as
well..but eventually, you know what's gonna' happen.

;o)

.............true, but only aftter I build another computer for some reason
or another.

;o)

Yes, you'll buy both plugins, plus one each of the actual
vintage modules just in case the slight difference in sound
between the plugin & the hardware is what's going to work on
mic "A" in your stereo cowbell pair vs. mic "B" in that same
pair.

:)
