Hi,
I checked yesterday that adat channels 5 & 6 on a ADAT card inside a mec
does not pass audio at all.
Is this a bug or could be a defected adat card ?
But a defected acrd should not pass audio on all channels , right ?
XP here with three mecs and three adat cards.
Regards,
Dimitrios

I got channels 3-6 out ... I think that is part of the XP/adat card/Aux send
thing ... Have you tried moving it around to a different slot ... I know
that is how we solved some of the same problems we had with aux sends doing
the same thing out of the 8-out analog card ...
Good luck ... let me know what you figure out.

I had a similar problem with an adat card passing all channels to ksp8 and I
thought it was the adat card.
It turned out to be the ksp. If you want to verify your adat card actually
works, try looping it back

ie....

> the in, and see if all 8 signals show up on the returns.

Hope that helps.
