My alternate G4, which I use in the studio for Digital Performer and outside the studio for the occasional remote, has died. Don't know what the problem is. It might be a simple fix but if it costs more than \$50 or so it might make more sense to replace it. I'm thinking that it might finally be time to try running Paris on a PC. Kerry tells me I can put a smokin' Paris PC together for under \$200. Can anyone steer me to which bits and pieces would work? If I were to make this my main studio machine I have a Magma 13 slot expansion chassis so PCI slots is not an issue. Also, another BIG question - How would I use my old Mac formatted drives w/ a PC system. Would I have to somehow copy them all over to PC formatted drives? That's a bit daunting!

Thanks!

Gantt

I'm sure others will chime in with more recent setups but here are the old ones that worked.

<http://www.kfocus.com/paris/>

read the _setup section....motherboards.....brian tankersley setup....etc...

Use MacDrive to access your Mac data. Obviously, not the OS or boot stuff, but the Paris projects and paf stuff? Macdrive...

Will MacDrive allow me to actually record and mix from Mac formatted drives or would I have to copy from the Mac drive to a PC drive?

It allows to you to open/read & copy files from a mac-formatted drive to your PC's drive(s).
