Ok, most interesting.

Here is a pic of one of the monitors on a good stand, (Chicago
Speaker Stands, lead shot filled / MoPad) and it's associated 1/3
octave FFT spectrum analysis response.   (The subwoofer is off for
both tests)

As you can see, this is very good response in any real-world
situation.   You have to spend huge sums to beat this response by
much.

See the next post for what happens when you put the speaker on
a desk.

DC
