Thadster... here's an Audix D6 for you to check out... no EQ on the kick at all, just a D6 through a Chandler TG2, and a Multiband compressor plugin... 3-band with the mid band ducked down from 400hz to 3k. Yeah it's metal, but ths kick sound could work with a lot of rock - you can hear it almost isolated in the beginning where it's just drums & bass:

<http://www.saqqararecords.com/MiscAudio/SedationFinalMixMP3.mp3>

(this version has the toms improved/less 'boxy', for those of you who may have checked out the first version)

Kind of a "Disturbed" meets "Breaking Benjamin" vibe, innit?

Neil

Neil, for that "dream theater" huge drum sound, try that D6 on the floor toms :)

Aaron, I use D4's on all the toms - those are pretty good & deep-sounding, too. In this song he only used the floor tom in three small sections, but the main problem is: this particular drummer hits his toms pretty lightly, as you can probably tell. He's a good solid hitter on the kick & snare, which any recordist appreciates, and he's all over the brass like the fucking opening sequence of "2001", but for some reason he hits his toms kinda soft.

If he's got anything over a 14", and you have a spare D6 or two... trust me, give it a try :)
Might be that he's not smacking the toms because of elevation level, stroke angle or tuning/head type. Just one drummer's opin though, but I've found that the feedback from the head, shell and angle make a big difference in my 20 something years of shell experience.

Curious.... is he using deep shell toms? Lot of times those don't clear the kick and have to be wedged to an uncomfortable position.
