I wonder if these would work for Paris or UAD-1 cards? I think DeeJ spotted these first.

Hi James,

Those boxes look a little short for an EDS card. UAD would fit though. I wonder about IRQ assignments. Maybe not as workable as the Magma option?

Chris did You test this out personally? Which one did you test out, the PCIe or Card Bus? I'm wondering how hard it would be to add a bigger power supply, what do you think? It's a lot less money than the Magma, about half the price.

It would be no big deal to modify the case or drop it in to a larger case so you could use full size Paris cards.

Hmm, good questions; never occurred to me to mod the case. Thinking about giving it a try? If you did it carefully, you could probably reassemble it fairly easily.

Here's something that would give me pause, though - "PCI Slots are fully Compliant PCI Bus Rev. 2.3". I wish I knew more about this, but isn't it 2.3 and forward that PARIS cards don't work with any more?

- Kerry

IIRC, it was a voltage issue. The 'key' in the PCI slot will be on the wrong side (front/back relevant) if it does not work, I believe. EDS needs 5v, I think the spec for 2.3 might be 3.3vdc... working off memory here, but if

somebody wants to google it that might get them started.

This will also run at 3.3v or 5v.

Probably not, actually. The EDS physically will not fit in a 3.3v slot (due to the aforementioned key) on top of not getting the 5 vdc it needs to run, IIRC. I really need to find my notes on that to be sure, but that's how I remember it according to spec... which was somewhat vague in areas, also IIRC. I want to say I sent a PCI spec brochure of sorts to Kerry for the paris web blog/page he's got going... Kerry, could you dig that up?

It seems to be 33 MHz clockspeed that is compatible with both 5 and 3.3 Volt. 66MHz clockspeed seems to use 5V, as far as I can see here:

[http://h20000.www2.hp.com/bc/docs/support/SupportManual/c002\\_56779/c00256779.pdf](http://h20000.www2.hp.com/bc/docs/support/SupportManual/c002_56779/c00256779.pdf)

That might have been a misprint, or they might have been referring to the PCIe (however, I wasn't aware of 5v on that slot) slot?  
The PDF erlilo posted explains this situation I believe.

As far as keying, they could get around this physically by simply \*omitting the key\* from inside the slot, which would make it \*physically\* universal.

But whether or not they did, the PCI 2.3 statement gives me pause - that definitely seems to be the one where the PCI spec discontinued its support for cards like the EDS.

B0D5%kg@kerrygalloway.com..</a>.<BR>  
</FONT><FONT COLOR=3D"#FF0000">&gt;&gt;&gt; Hmm, good questions; never occur=  
ed to me to mod the case. Thinking about<BR>  
&gt;&gt;&gt; giving it a try? If you did it carefully, you could probably r=  
eassemble it<BR>  
&gt;&gt;&gt; fairly easily.<BR>  
&gt;&gt;&gt; <BR>

&gt;&gt;&gt; Here's something that would give me pause, though - &quot;PCI = Slots are fully<BR>  
&gt;&gt;&gt; Compliant PCI Bus Rev. 2.3&quot;. I wish I knew more about thi= s, but isn't it<BR>  
&gt;&gt;&gt; 2.3<BR>  
&gt;&gt;&gt; and forward that PARIS cards don't work with any more?<BR>  
&gt;&gt;&gt; <BR>  
&gt;&gt;&gt; - Kerry<BR>  
&gt;&gt;&gt; <BR>  
&gt;&gt;&gt; On 6/3/08 1:58 PM, in article 4845b075\$1 @linux, &quot;James &n= bsp;McCloskey&quot;<BR>  
&gt;&gt;&gt; &lt;<a href=3D"excelsm@hotmail.com">excelsm@hotmail.com</a>&gt; = wrote:<BR>  
&gt;&gt;&gt; <BR>  
</FONT><FONT COLOR=3D"#800080">&gt;&gt;&gt;&gt; <BR>  
&gt;&gt;&gt;&gt; Chris did You test this out personally? &nbsp;Which one di= d you test out, the<BR>  
&gt;&gt;&gt;&gt; PCIe<BR>  
&gt;&gt;&gt;&gt; or Card Bus? &nbsp;I'm wondering how hard it would be to a= dd a bigger power<BR>  
&gt;&gt;&gt;&gt; supply,<BR>  
&gt;&gt;&gt;&gt; what do you think? &nbsp;It's a lot less money than the Ma= gma, about half the<BR>  
&gt;&gt;&gt;&gt; price.<BR>  
&gt;&gt;&gt;&gt; <BR>  
&gt;&gt;&gt;&gt; It would be no big deal to modify the case or drop it in t= o a larger case<BR>  
&gt;&gt;&gt;&gt; so you could use full size Paris cards.<BR>  
&gt;&gt;&gt;&gt; <BR>  
&gt;&gt;&gt;&gt; Chris Ludwig &lt;<a href=3D"chrisl@adkproaudio.com">chrisl@a= dkproaudio.com</a>&gt; wrote:<BR>  
&gt;&gt;&gt;&gt;&gt; opps sent this via email instead of news group.<BR>  
&gt;&gt;&gt;&gt;&gt; <BR>  
&gt;&gt;&gt;&gt;&gt; HI James,<BR>  
&gt;&gt;&gt;&gt;&gt; We tried it here and it didn't seem to on anything.<BR= >  
&gt;&gt;&gt;&gt;&gt;&gt; Also the power supply will be way under powered for an= ything like a UAD.<BR>  
&gt;&gt;&gt;&gt;&gt;&gt; Too short for a Paris card.<BR>  
&gt;&gt;&gt;&gt;&gt;&gt; <BR>

Yep, valid concerns; investigation definitely seems called for before anyone gets too excited.

cards or less - Dubvibe here in Vancouver got two JUNO nominations and a new one and see where they lead.

some help getting some bugs ironed out, or (if it took them little effort) in tailoring a system slightly to sell to a niche market. From my own perspective, the worst case scenario is we waste a little time and wind up no worse off than before.

- Kerry

Hey, thanks AA –

The VirtuaVia's PSU is causing deal-breaking problems, and those need to be  
eliminated first before anything else can be determined. Here's a very  
interesting thread from the UAD forums, looks like someone else was thinking  
the same thing as me –

How to get the VirtuaVia box working with multiple UAD cards

How to get the VirtuaVia box working with multiple UAD cards

by mkstat on Mon May 12, 2008 12:03 pm

A few months ago I bought a Virtua Via PCIe to PCI expansion chassis for my new MacPro 8x3GHz to run my PCI UAD cards.

The reason why the VV box doesn't work properly with more than one UAD cards is because of a weak powersupply. The included external PSU delivers 12V/3A and unfortunately the maximum rating of the internal (on the card) 5V step-down switching regulator (2596) is also limited to 3A. So using a higher power rating 12V PSU is pointless. The UAD manual says: „Each UAD card uses a maximum of 14 watts of 5 volt power from the PCI bus“ – in other words each card draws 2.8A at 5V from the PSU. So there is no chance for safe operation of more than one card plugged in the chassis. I actually had problems with just one card at higher cpu loads (80%+) in form of dropouts.

BUT:

After disabling the on-card 5V step-down switching regulator and connecting a 400W ATX computer powersupply directly to the PCB in the VV box a setup with 3 UAD cards (each with 95% CPU load) worked flawlessly!

The modification is quite easy and safe to do for people with some experience in electronics and PCB soldering skills.

For those who are interested I will post a step by step guide with some pics for this modification during next week.

-Markus

Hi,  
I have a P4B asus motherboard running 5 eds cards.  
So running 5 cards it is a no brainer with my config.  
I would love to try the sixth slot on that MB but have not a working effect  
addon card for my sixth EDS500 card to try this out.  
If that would succeed (why not) then you can have 6 eds cards on a P4B motherboard  
that can have up to 2.8 GHZ with 3gb PC133 memory.

Regards,  
Dimitrios

Hey D,  
Ya but I'll have a UAD (or 2?) and a Creamware Pro  
along with Cubase in the same box hopefully.  
Tom

"Dimitrios" <musurgio@xxx.gr> wrote in message =  
news:48482faa\$1@linux...

Hi,  
I have a P4B asus motherboard running 5 eds cards.  
So running 5 cards it is a no brainer with my config.  
I would love to try the sixth slot on that MB but have not a working =  
effect  
addon card for my sixth EDS500 card to try this out.  
If that would succeed (why not) then you can have 6 eds cards on a P4B =  
motherboard  
that can have up to 2.8 GHZ with 3gb PC133 memory.

Regards,  
Dimitrios

I saw that, but I thought the card wouldn't fit because of it's size.

Re: PCI expansion? yup... that's what I'd have done. I would probably in =  
younger days when I had more time gone beyond that and built my own =  
power supplies and skipped the whole ATX thing. Bypassing the crappy =  
regulator is probably the easiest way to getting enough power through =  
the chassis, BUT you will definitely want some kind of protection =  
circuit depending on your supply of choice. Trashing UAD's would suck, =  
and trashing EDS's would suck more. \$300 a pop at The Soniq =3D a BIG =  
bill. Better to build the right supply from the start, and frankly your =  
EDS cards will last longer with cleaner voltage (and likely be more =  
stable as well).

AA

"Kerry Galloway" <[kg@kerrygalloway.com](mailto:kg@kerrygalloway.com)> wrote in message =

news:C46D7D7F.B104%kg@kerrygalloway.com...

Hey, thanks AA =E2=80=93=20

The VirtuaVia=E2=80=99s PSU is causing deal-breaking problems, and = those need to be eliminated first before anything else can be = determined. Here=E2=80=99s a very interesting thread from the UAD = forums, looks like someone else was thinking the same thing as me = =E2=80=93=20

How to get the VirtuaVia box working with multiple UAD cards

How to get the VirtuaVia box working with multiple UAD cards  
by mkstat on Mon May 12, 2008 12:03 pm

A few months ago I bought a Virtua Via PCIe to PCI expansion chassis = for my new MacPro 8x3GHz to run my PCI UAD cards.

The reason why the VV box doesn=C2=B4t work properly with more than = one UAD cards is because of a weak powersupply. The included external = PSU delivers 12V/3A and unfortunately the maximum rating of the internal = (on the card) 5V step-down switching regulator (2596) is also limited to = 3A. So using a higher power rating 12V PSU is pointless. The UAD manual = says: =E2=80=9EEach UAD card uses a maximum of 14 watts of 5 volt power = from the PCI bus=E2=80=9C =E2=80=93 in other words each card draws 2.8A = at 5V from the PSU. So there is no chance for safe operation of more = than one card plugged in the chassis. I actually had problems with just = one card at higher cpu loads (80%+) in form of dropouts.

BUT:

After disabling the on-card 5V step-down switching regulator and = connecting a 400W ATX computer powersupply directly to the PCB in the VV = box a setup with 3 UAD cards (each with 95% CPU load) worked flawlessly! = =20

The modification is quite easy and safe to do for people with some = experience in electronics and PCB soldering skills.

For those who are interested I will post a step by step guide with = some pics for this modification during next week.

-Markus

"Kerry Galloway" <kg@kerrygalloway.com> wrote in message =  
news:C46D89E9.B110%kg@kerrygalloway.com...

Holy cow - how'd I overlook this in the excitement about the expansion =  
chassis?

<http://virtuavia.eu/shop/pci-express-to-pci-adapter-p29855.html>

If it worked with an EDS - wouldn't this be the ticket to adapt an EDS =  
card to a modern, post-PCI 2.3 motherboard without an expansion chassis =  
- for 49 Euro?

Check this thread out here - it starts getting really interesting at =  
post #27. What's the physical size of a UAD vs. an EDS?

=

<http://www.gearslutz.com/board/music-computers/122120-company-offers-pci-pcie-adapter.html>

If this works - the game just suddenly got a lot more interesting.

=20

By the way, Martin - the three objections so far seem to be 1) =  
size of box, 2) keying of slots and 3) power supply.

You took care of the box size question. Here's a picture of the =  
inside of one of their regular boxes, showing the keying of the slots - =

=

[http://virtuavia.eu/shop/images/detailed\\_images/big\\_pci\\_to\\_pci\\_box.jpg](http://virtuavia.eu/shop/images/detailed_images/big_pci_to_pci_box.jpg)

And here's an EDS showing its keying (it's the wrong orientation, =  
but it should be easy to match up) -

=20

That is the RIGHT keying for an EDS!=20

<http://www.synrise.de/images/ensoniq-eds-1000.jpg>

So those look pretty good to go, at least to me.=20

In my email to them I'm addressing the third - what's the =  
equivalent wattage of their PSU and would they have any interest in =  
making one with a PSU that made PARIS happy?

For that matter, I wonder if they're just standard PC PSUs, =  
meaning they could be swapped out for what you like.

- Kerry=20

=20

=20

I called The Nguyen at TheSoniq earlier and forwarded him everything we've discovered - including the detailed step-by-step for the PSU mod - and asked if he'd be into doing these mods for PARIS users if we can verify the EDS cards work otherwise with them, and how much he'd charge for it.

BR>

A few months ago I bought a Virtua Via PCIe to PCI &nbsp;expansion chassis =  
for my new MacPro 8x3GHz to run my PCI UAD cards.<BR>

The &nbsp;reason why the VV box doesn't work properly with more than =  
one UAD cards is &nbsp;because of a weak powersupply. The included external =  
PSU delivers 12V/3A and &nbsp;unfortunately the maximum rating of the intern=  
al (on the card) 5V step-down &nbsp;switching regulator (2596) is also limit=  
ed to 3A. So using a higher power &nbsp;rating 12V PSU is pointless. The UAD=  
manual says: &#8222;Each UAD card uses a &nbsp;maximum of 14 watts of 5 vol=  
t power from the PCI bus&#8220; &#8211; in other words each &nbsp;card draws=  
.2.8A at 5V from the PSU. So there is no chance for safe operation &nbsp;of =  
more than one card plugged in the chassis. I actually had problems with &nbsp;=  
&nbsp;just one card at higher cpu loads (80%+) in form of &nbsp;dropouts.<BR>

<BR>

BUT:<BR>

After disabling the on-card 5V step-down switching &nbsp;regulator and conn=  
ecting a 400W ATX computer powersupply directly to the PCB &nbsp;in the VV b=  
ox a setup with 3 UAD cards (each with 95% CPU load) worked &nbsp;flawlessly=  
! &nbsp;<BR>

<BR>

The modification is quite easy and safe to do for &nbsp;people with some ex=  
perience in electronics and PCB soldering &nbsp;skills.<BR>

<BR>

For those who are interested I will post a step by step guide &nbsp;with so=  
me pics for this modification during next &nbsp;week.<BR>

<BR>
